

# FLEXTOOL DOUBLE BEAM SCREED FDBS SERIES

Flextool Double Beam Screeds are an efficient means of levelling and compacting large areas of concrete. Increase placement rates as a vibrating screed strikes and compacts concrete in one pass. The vibratory motion of the beams imparts a self-propelling motion to the screed assisting it to travel over the concrete.

Pretensioned beams on both 6.5 m and 8.2 m models allow the surface flatness to be controlled by adjusting beam pretension and are recommended for precision finishing.
