

FLEXTOOL FLEXSHAFT SUBMERSIBLE PUMPS – GENERAL PURPOSE FP212G

The Flextool FP212 series of flexible shaft submersible pumps set the benchmark for performance and durability.

Flextool flexshaft submersible pumps are highly efficient units which are operated by petrol or diesel portable drive units. Flextool pumps are completely self-priming and extremely robust in their design. The flexible drive shaft facilitates use in many situations where close coupled pumps would not be suitable. The FP212 series come with 3 x 1 metre long flexshaft support springs which protect the drive shaft when operating over the sharp edge of excavations, pits, dams and other similar applications. Plus all pumps include an 8 metre support rope.
